

Change your pallets in less than 30 seconds – just by pushing, there's no need to lift.

You know this requirement from your daily work: Goods have to be moved from one pallet to another. What do you do? Manual repacking is a time-consuming and laborious process for employees. Conventional pallet tippers and turners pose a significant risk of damaging the goods. Furthermore, these processes are time-consuming and often labour-intensive.

Our patented PARATUS® Change is the solution. It eliminates the need for manual repacking, reduces labour costs, and improves efficiency. The patented principle makes it simple: the start pallet is placed in the pallet changer; the target pallet is fetched and pushed under the goods with the forklift truck. The start pallet is pushed out at the back. Done!
