

Combined pallet changer PARATUS® Change +LIFT

The PARATUS® Change +LIFT optimises two work steps with a single device. First of all, like all other pallet changers, it also enables a pallet change in under 30 seconds.

However, the empty start pallets are not returned to the front with the slider but rather pushed back and then automatically stacked in the pallet magazine, eliminating the need for additional manual effort.

This efficient combination not only reduces the workload but also ensures a smooth and efficient flow throughout the entire process.

Further details:

- multiple-reinforced construction
- premium quality: made in Germany
- powder coating
- smooth, shiny surface
- anthracite grey RAL 7016
- special colour possible
- stainless steel possible
- size depending on pallet
